Challenges:

- Manual typing of discharge summaries and operative notes was a time-consuming and error-prone process for the Aadicura team.

- The reliance on manual typing led to a substantial investment of time from both medical professionals and support staff, negatively impacting overall productivity and patient care turnaround times.

- Human errors in documentation were a potential risk, as manual typing is prone to inaccuracies and inconsistencies, which could have led to adverse patient outcomes.
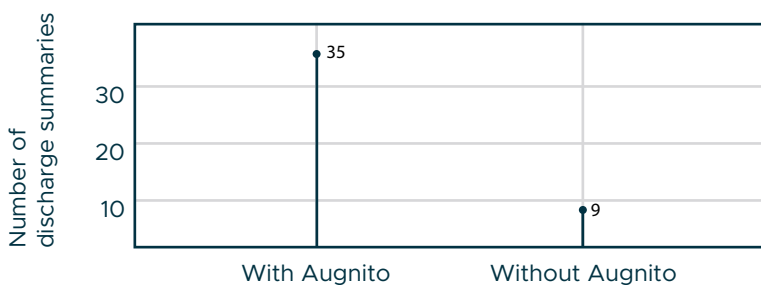

About:

Aadicura Hospital has more than 20 speciality departments backed by experienced professionals and latest infrastructure. It has round the clock emergency services, pharmacy, diagnostic services, blood bank to ensure that the patients get the best of services under one roof. The name Aadicura means The One That Cares For All. Their mission is to build and run a one-of-its-kind tertiary care hospital that provides ethical, compassionate, and cost-effective high-quality patient care.

Solution:

- Augnito, a cutting-edge speech recognition software, was adopted to address the challenges of time-consuming and error-prone manual typing of discharge summaries and operative notes.

- The software's seamless integration with eClinicalWorksand intuitive interface allowed for swift adoption, with users reporting significant time savings and enhanced accuracy in documentation.

- Augnito's 99% accurate speech recognition AI has reduced the chances of errors, enabling faster creation of discharge summaries and operative notes, and improving overall turnaround times for patient care.

Impact:

- Augnito's implementation has resulted in a significant reduction in the time required to create discharge summaries, from 2.8 minutes to 1.4 minutes per report, leading to a daily time saving of 49 minutes.

- The hospital observed a potential cost saving of approximately 70% per discharge summary by replacing manual typing with speech recognition technology.

- Doctors experienced a remarkable productivity gain of 288%, enabling them to create an additional 26 discharge summaries within the same time frame, contributing to improved patient care and turnaround time.

> Before Augnito, manually typing discharge summaries and operative notes was a productivity bottleneck, impacting both speed and accuracy. Integrating Augnito's user-friendly voice-to-text solution revolutionized our workflow. Dictating summaries now saves us valuable time, while its intuitive AI-powered features minimize errors, ensuring the highest quality documentation for our patients.
